Name	: Mr. RADHESHYAM MITTAL		
Lab No.	: 485488209	Age	: 64 Years
Ref By	: Self	Gender	: Male
Collected	: 23/9/2025 11:32:00AM	Reported	: 24/9/2025 9:06:04AM
A/c Status	: P	Report Status	: Final
Collected at	: PAWAR DIAGNOSTIC Wadgaon Sheri pune,Punyanagari soc,Ayappa tample,Wadgaon Sheri PUNE 411014	Processed at	: LPL-PUNE LAB Ground floor, Anand Emerald, Sakore Nagar, Near Symbiosis University , Airport Road Pune-411014

MC-2762

Test Report

Test Name	Results	Units	Bio. Ref. Interval
GLUCOSE FASTING (F) (Hexokinase)	**116.00**	mg/dL	70.00 - 100.00

Note: Test conducted in Plasma

VITAMIN D 25 - HYDROXY (CLIA)	**40.89**	nmol/L	75.00 - 250.00

Interpretation

LEVEL	REFERENCE RANGE IN nmol/L	COMMENTS
Deficient	< 50	High risk for developing bone disease
Insufficient	50-74	Vitamin D concentration which normalizes Parathyroid hormone concentration
Sufficient	75-250	Optimal concentration for maximal health benefit
Potential intoxication	>250	High risk for toxic effects

Note

- The assay measures both D2 (Ergocalciferol) and D3 (Cholecalciferol) metabolites of vitamin D.
- 25 (OH)D is influenced by sunlight, latitude, skin pigmentation, sunscreen use and hepatic function.
- Optimal calcium absorption requires vitamin D 25 (OH) levels exceeding 75 nmol/L.
- It shows seasonal variation, with values being 40-50% lower in winter than in summer.
- Levels vary with age and are increased in pregnancy.
- A new test Vitamin D, Ultrasensitive by LC-MS/MS is also available
- Test conducted on serum

Comments

Vitamin D promotes absorption of calcium and phosphorus and mineralization of bones and teeth. Deficiency in children causes Rickets and in adults leads to Osteomalacia. It can also lead to Hypocalcemia and Tetany. Vitamin D status is best determined by measurement of 25 hydroxy vitamin D, as it is the major circulating form and has longer half life (2-3 weeks) than 1,25 Dihydroxy vitamin D (5-8 hrs).

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.

Test Report

Test Name	Results	Units	Bio. Ref. Interval

Decreased Levels

- Inadequate exposure to sunlight
- Dietary deficiency
- Vitamin D malabsorption
- Severe Hepatocellular disease
- Drugs like Anticonvulsants
- Nephrotic syndrome

Increased levels

Vitamin D intoxication

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.
