N. M. WADIA INSTITUTE OF CARDIOLOGY

DEPARTMENT OF ECHOCARDIOGRAPHY

National Accreditation Board For Hospitals & Healthcare Providers

NAME OF THE PATIENT	:	MR. RADHE SHYAM MITTAL – 113258
AGE / SEX	:	58 YEARS / MALE
REFERRED BY	:	DR. D. B. GAWARE
TEST PERFORMED / DT.	:	COLOR DOPPLER / 08.07.2019

Status: Post CABG (03.04.2019)

MITRAL VALVE : has thin leaflets, normal subvalvar structures and normal motion.

AORTIC VALVE : has 3 thin leaflets with normal opening. Aortic root is dilated.

I.V.S. & I.A.S. : are intact.

LEFT VENTRICLE : is normal in size and thickness. Basal anterior, mid IVS, apical IVS and apex are thin and severely hypokinetic. Inferior segment is hypokinetic.

LEFT ATRIUM: is normal in size and free of clots.

RIGHT VENTRICLE & RIGHT ATRIUM: are normal.

C.F.I. SHOWS : mitral diastolic velocities are altered. There is trivial M.R.
Tricuspid diastolic velocities are normal. There is trivial T.R.
Aortic systolic velocities are normal. There is no A.R.
Velocities across pulmonary valves are normal.

IMPRESSION :

- **NORMAL LV SIZE.**
- **ANTERO-SEPTAL AND INFERIOR HYPOKINESIA.**
- **JERKY SEPTAL MOTION (POST-OP)**
- **COMPROMISED LV SYSTOLIC FUNCTION – VISUALLY ESTIMATED 2D LVEF ABOUT 35-40%.**
- **DILATED AORTIC ROOT**
- **TRIVIAL MITRAL REGURGITATION.**
- **TRIVIAL TRICUSPID REGURGITATION.**
- **NO PH – CALCULATED RV SYSTOLIC PRESSURE 29 mm Hg.**
- **NO THROMBUS / VEGETATION / PERICARDIAL EFFUSION.**

DR. D. B. GAWARE
MD,DNB(CARD.) FACC
Cardiologist.
