Test Report

Test Name	Results	Units	Bio. Ref. Interval
LIVER FUNCTION TEST (LFT)			
AST (SGOT) (IFCC without P5P)	16.0	U/L	<50
ALT (SGPT) (IFCC without P5P)	<7.0	U/L	<50
AST:ALT Ratio (Calculated)	**2.67**		<1.00
GGTP (IFCC)	16.0	U/L	<55
Alkaline Phosphatase (ALP) (IFCC, PNPP-AMP-Buffer)	**25.00**	U/L	30 - 120
Bilirubin Total (DPD)	0.46	mg/dL	0.20 - 1.10
Bilirubin Direct (DPD)	0.12	mg/dL	<0.20
Bilirubin Indirect (Calculated)	0.34	mg/dL	<1.10
Total Protein (Biuret)	**5.99**	g/dL	6.40 - 8.10
Albumin (BCG)	**3.04**	g/dL	3.20 - 4.60
Globulin(Calculated)	2.95	gm/dL	2.0 - 3.5
A : G Ratio (Calculated)	1.03		0.90 - 2.00

Note

1. In an asymptomatic patient, Non alcoholic fatty liver disease (NAFLD) is the most common cause of increased AST, ALT levels. NAFLD is considered as hepatic manifestation of metabolic syndrome.
2. In most type of liver disease, ALT activity is higher than that of AST; exception may be seen in Alcoholic Hepatitis, Hepatic Cirrhosis, and Liver neoplasia. In a patient with Chronic liver disease, AST:ALT ratio>1 is highly suggestive of advanced liver fibrosis.
3. In known cases of Chronic Liver disease due to Viral Hepatitis B & C, Alcoholic liver disease or NAFLD, Enhanced liver fibrosis (ELF) test may be used to evaluate liver fibrosis.
4. In a patient with Chronic Liver disease, AFP and Des-gamma carboxyprothrombin (DCP)/PIVKA II can be used to assess risk for development of Hepatocellular Carcinoma.
5. Test conducted in Serum

If Test results are alarming or unexpected, client is advised to contact the Customer Care immediately for possible remedial action.

MC-2762

Test Report

Test Name	Results	Units	Bio. Ref. Interval
HbA1c (HPLC, NGSP certified)			
HbA1c	**6.1**	%	4.00 - 5.60
Estimated average glucose (eAG)	128	mg/dL	

Interpretation

HbA1c result is suggestive of at risk for Diabetes (Prediabetes)/ well controlled Diabetes in a known Diabetic

Interpretation as per American Diabetes Association (ADA) Guidelines

Reference Group	Non diabetic adults >=18 years	At risk (Prediabetes)	Diagnosing Diabetes	Therapeutic goals for glycemic control
HbA1c in %	4.0-5.6	5.7-6.4	>= 6.5	<7.0

Note

1. Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1C result does not correlate with the patient's blood glucose levels.
2. Test conducted in EDTA Whole blood

FACTORS THAT INTERFERE WITH HbA1C MEASUREMENT	FACTORS THAT AFFECT INTERPRETATION OF HBA1C RESULTS
Hemoglobin variants,elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbamylated Hb in patients with renal failure) can affect the accuracy of HbA1c measurements	Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g.,recovery from acute blood loss, hemolytic anemia, HbSS, HbCC, and HbSC) will falsely lower HbA1c test results regardless of the assay method used.Iron deficiency anemia is associated with higher HbA1c
